Learning How to Learn: Powerful mental tools to help you master tough subjects

Final Project

Jan 2015 Session via [Coursera](#)

Cover

This repository contains the source project files for my Final Project for [Learning How to Learn: Powerful mental tools to help you master tough subjects](#). You may view the presentation [here](#).

It is intended to be a web presentation, explaining and teaching three (3) topics that I've found most interesting during the session. These topics are subject material that I have already applied to my life, both as a working professional and a lifelong learner. I have learned a lot by taking this course, and I hope that by taking the time to view my presentation, it will enourage you to take the class as well!

Topics Covered

1. Focused and Diffused modes of Thinking
2. Procrastination
3. Chunking

Etc.

As this project is a software project, I will be making updates and changes as I see fit. My goal is to make this presentation as enjoyable as it can be.
